For years, Mt. Juliet has received the great service Bentley's Heating and Cooling, but now the family owned business has a home in Mt. Juliet.

Bentley's has opened an office at 11853 Lebanon Road in Mt. Juliet. You might have seen their sign out on the road about their Free Filter Fridays special.

You can go into the location and get a free air filter, no purchase necessary. Bill Bentley said he keeps getting calls asking what is the gimmick about the free filters, and he says there is none at all.

"We just want people to get to know us," said Bentley.

William Bentley founded the company in 1945. Since then they have provided great service to Wilson and the surrounding counties, and the company has been passed down the generations of the Bentley family.

Bentley's offers a vast array of services from service and repair of your HVAC units, installing of new Trane or Rheem units, geothermal units, water heaters, electric air cleaners. They are Trane and Rheem certified.

Bentley believes that Trane is the best on the market. He said that on most units, they dip their compressors in varnish, but Trane dips theirs in an epoxy, which is way more efficient and durable. He said the compressor is basically the engine of the unit, so if that is the highest quality, the unit will be the highest quality.

Bentley said the most important part of having a home in Mt. Juliet is making things easier for the customer. You can now come into the office to pay your bill, get information from the knowledgeable staff, or on Fridays, pick up your free filter. He said he enjoys being a bigger part of the community as well, they have already joined the Mt. Juliet/West Wilson Chamber of Commerce, they look to sponsor ball teams, and help the community in any way they can. Bentley's Heating and Cooling is located at 11853 Lebanon Road in Mt. Juliet. They can be reached by calling 754-COOL.
